A General Topology Workbook eBook

These papers survey the developments in General Topology and the applications of it which have taken place since the mid 1980s. The book may be regarded as an update of some of the papers in the Handbook of Set-Theoretic Topology (eds. Kunen/Vaughan, North-Holland, 1984), which gives an almost complete picture of the state of the art of Set Theoretic Topology before 1984.

Schaum's Outline of Theory and Problems of General Topology

The initial concepts of general topology are the concepts of a topological space and a continuous mapping, introduced by F. Hausdorff in 1914. A particular case of a continuous mapping is a homeomorphism — a continuous one-to-one mapping between topological spaces that has a continuous inverse mapping.

General topology - Encyclopedia of Mathematics

In mathematics, an adherent point (also closure point or point of closure or contact point) of a subset A of a topological space X , is a point x in X such that every neighbourhood of x (i.e. every open set containing x) contains at least one point of A . A point x is an adherent point for A if and only if x is in the closure of A , thus $x \in \bar{A} \iff x \in \bigcap_{U \ni x} U \cap A \neq \emptyset$.
