Energy And Exergy Analysis Of

Energy and exergy analysis has been presented for most of the systems. The energetic and the exergetic COP for each system are presented. Renewable energy sources are also discussed including geothermal, solar, and wind energy, a with combination with refrigeration systems in different industrial and residential applications.

Energy and Exergy Analysis of Refrigeration Systems ...

exergy analysis of the solar thermal devices in general and solar air/water heaters in particular, exergy analysis of photovoltaics, exergy analysis of biomass based energy systems is scant. Both the efficiencies i.e. energy and exergy for solar air heater were found to be better with thermal energy storage than those without thermal energy storage.

It presents a thermodynamic analysis of wind energy using energy and exergy analysis and the exergy is formulated of wind energy and its components. Energy and exergy efficiencies are compared and shown to depend on the area considered. A spatio-temporal mapping approach to wind exergy analysis is also provided.

Exergy Analysis - an overview | ScienceDirect Topics

The energy and exergy analysis was performed to understand the effects of the proposed design at engine rated speed. Results showed that between 16 and 18% increase in engine mechanical power can be achieved by adding turbo-compressor. Furthermore, the recommended ABC system can recover up to 1.1 kW extra electrical power from the engine ...

Additionally, an exergy analysis model suitable for coal-fired industrial boilers is proposed under the framework of the first and second laws of thermodynamics to improve the operation of boilers. The energy and exergy efficiencies as well as CO 2 emissions have been discussed as well. The results indicate that the heat loss of flue gas and unburnt carbon represent the main heat losses.

In the present work, energy and exergy analysis of wavy plate solar air collector (WPSAC) using a novel hybrid expert system is presented. Sugeno-based subtractive clustering method is used for extraction of cluster centers while multi-criteria ratio analysis is used for optimization and prediction of WPSAC parameter. Experimentation (270 trials) on WPSAC has been performed by varying the mass ...
