**Engineering Design  
Guidelines  
Distillation Kolmetz**

In designing a distillation column, the thermodynamics of the vapor and liquid phases must be understood. The vapor-liquid equilibrium (VLE) determines the minimum number of stages required to achieve the degree of separation needed. The

minimum reflux ratio  
also depends on the  
VLE data of the  
mixture.

tray in a distillation column is designed to promote contact between the vapor and liquid on the stage, so there is mass and heat transfer. Ideally, the vapor and liquid leaving the stage are in equilibrium.
