Special Relativity Questions & Problems (Answers) 1. If you were on a spaceship travelling at  $0.50c$  away from a star, what speed would the starlight pass you? (The speed of light:  $3.00 \times 10^8$  m/s) 2. Does time dilation mean that time actually passes more slowly in moving reference frames or that it only seems to pass more slowly?

The two-body problem in general relativity is the determination of the motion and gravitational field of two bodies as described by the field equations of general relativity. Solving the Kepler problem is essential to calculate the bending of light by gravity and the motion of a planet orbiting its sun.
