Introduction To Mechanical System Simulation

As commented on in the introduction, there are some fundamental differences between the FEA (Finite Element Analysis) and MBD (Multibody Dynamics) approaches to the analysis of an articulating mechanical system. In this theory section, the basic contrasts between the two approaches will be examined initially.

Mechanical System Simulation (MSS) is the study of the motion of mechanical systems caused by external forces and excitations that act on the system. MSS simulates large displacement motion, i.e., the extent of the relative motion of the components can be on the order of the overall dimensions of the system.

Computer simulation is the process of mathematical modelling, performed on a computer, which is designed to predict the behaviour of or the outcome of a real-world or physical system. Since they allow to check the reliability of chosen mathematical models, computer simulations have become a useful tool for the mathematical modeling of many natural systems in physics (computational physics ...
