billion today. The world population growth rate declined from 2.2% per year 50 years ago to 1.05% per year.

## **World Population Growth - Our World in Data**

The current human population is estimated to be over 7 billion. At present the number of births annually exceeds the number of deaths, which means that the population is increasing, and is estimated to reach 9 billion by 2040. If you do the math - that's only 25 years away! In 1750 the world population was estimated at less than 800 million.

## **Power of Doubling Lab - ChasesEportfolio**

In red you see the annual population growth rate (that is, the percentage change in population per year) of the global population. It peaked around half a century ago. Peak population growth was reached in 1968 with an annual growth of 2.1%. Since then the increase of the world population has slowed and today grows by just over 1% per year.

## **Future Population Growth - Our World in Data**

The world's human population is growing at an exponential rate. Humans have increased the world's carrying capacity through migration, agriculture, medical advances, and communication. The age structure of a population allows us to predict population growth. Unchecked human population growth could have dire long-term effects on our environment.
